Recent Events

Our December Webinar featured a panel of industry experts from VEIC, OSD, Boston Public Schools, and National Grid. Our panel focused on considerations for schools and bus operators to support early planning for and procurement of electric bus fleets, charging stations, and infrastructure. If you missed it, check out the [recording](#).

The project team hosted a Quarterly Meeting in January for enrolled districts where our experts discussed early findings in preparing for site assessments. Schools had an opportunity share what they are hoping to get out of the program as well as voice concerns and questions about electrifying their school fleets. Quarterly Meetings are one of many program offerings for enrolled districts to engage in, and a great opportunity to come together and learn about how other districts are approaching school bus electrification.

electrification to help school districts and fleet operators prepare for the transition. Our industry experts will highlight what is on the near-term horizon for schools and fleet operators to be aware of, and what these statewide goals and requirements mean for fleets. We will share available resources, hear from school representatives who have deployed electric buses, and will leave plenty of time for questions to be answered.
